                                                                                   01-SEP-1998 (first entry)
Staphylococcus aureus protein of unknown function.
Staphylococcus aureus protein ribozyme, antisense sequence; control; Staphylococcus gene; regulatory element; batterial gene expression; vaccine; Staphylococcuma infection; food poisoning; scaled skin syndrome;
                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a Staphylococcus aureus protein of unknown function. The DNA sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host gaginst invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        67 DFIPVQ---GVYAAGRLDRDSEGLLVLTNDGVLQARLTQPGKRTGKIYYVQVEGEP---D 120

Inhibition of virulence genes from Staphylococcus aureus - useful for, e.g. screening for potential anti-microbial agents
Tor, e.g. screening for potential anti-microbial agents
Claim 1; Page 179-180; 203pp; English.
This is the deduced amino acid sequence of the protein product of a virulence gene (see X07134) newly identified in Staphylococcus aureus mutant P1539.
Cof aureus mutants containing chromosomal insertions of asignature-tagged transposon were generated, and those with attenuated virulence were identified in a mouse model of bacteraemia. The nucleotide sequences of regions flanking the transposon insertion sites of these mutants were determined, and database sequence comparisons were performed to identify these virulence genes (see X07088-136) and the possible function of their protein products (see W97680-724). The P1539 virulence gene product is unknown but solves 41% identity to the hypothetical 33.7 kDa protein YHCT of Bacillus subtilis p54604. A claimed method of identifying an antibacterial agent involves assaying potential agents for the ability to interfere with the expression of S. aureus virulence gene products. Also new is a S. aureus organism containing a functional mutation in one of the virulence genes, and its use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      88 EDNHMLIINKPAGIATHPNEDGQTGTLANLIAYHYQINGETCKVRHVHRLDQDJSGAIVF 147

The riboflavin genes isolated from S. cerevisiae allow the proon. of riboflavin in eukaryotes. The gene products are:
- rib-1 gene: guanosine triphosphate (GTP)-cyclohydrolase II (transforming GTP to 2,5-diamino-6-ribosylamino-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GA;

When isolated swine hepatitis E virus - used to develop products for the diagnosis, prevention and treatment of hepatitis E virus

The diagnosis, prevention and treatment of hepatitis E virus

The diagnosis, preventionally humans

Example 1, Fig 3A; 70pp; English.

This invention describes a swine hepatitis E virus (HEV) and its natural mutants which are capable of cross-reacting with antibodies reactive with a human HEV strain or natural mutants. The HEV and the proteins can be used in humans to prevent possible infection by human HEV. The Swine HEV can be used in humans to prevent possible infection by human HEV. The swine HEV can also be used as a therapeutic treatment for infection by coher strains of HEV and the WeV and also be used for determining the susceptibility of cells or products can also be used for determining the susceptibility of cells or organs to infection with swine HEV. The swine HEV is particularly useful for the development of agents for the prevention, treatment and detection of human HEV because it is not a human virus and thus can be handled both experimentally and clinically without fear of severe infection and/or
                                                                                                                                                                                                                                     11;
(3H)-pyrimidine-5-phosphate);
- rib-7 gene: HTP-reductase (transforming 2,5-diamino-6-ribosylamino-4-
(3H)-pyrimidine-5-phosphate into 2,5-diamino-ribitylamino-
2,4-(1H,3H)-pyrimidine-5-phosphate (DRAP));
- rib-2 gene: (DRAP)-deaminase (formation of 5-amino-6-ribityl
amino-2,4-(1H,3H)-pyrimidindinaion);
- rib-4 gene: 6,7-dimethyl-8-ribityllumazine (DMRL)-synthase;
- rib-5 gene: riboflavin-synthase;
- rib-3 gene: L-3,4-dihydroxy-2-butanone-4-phosphate (DBP)-synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-JUN-1999 (first entry)
Human HFO ORF 2 protein from strain Hyderabad.

function. The invention provides DNs sequences (V65201 to.V65304) from the Streptococcus pneumoniae genome and corresponding protein sequences (V6501 to.V65304) from the Streptococcus pneumoniae genome and corresponding protein sequences (W80605 to W80728). The protein sequences are classified as hypothetical, cell wall blosynthetic, external target, or minimal gene set proteins. A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the proteins. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying virulence genes in S. pneumoniae. Antibodies that selectively bind to the above proteins or peptide fragments can be used to treat S. pneumoniae cells.

S. pneumoniae cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S. pneumoniae protein of unknown function. Streptococus pneumoniae protein: recombinant; gene expression; DNA chip; virulence; antibody; infection; detection; treatment; hypothetical; cell wall biosynthetic, external target; minimal gene set protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 3; Page 299; 333pp; English.
This sequence represents a Streptococcus pneumoniae protein of unknown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   119 PDDASLAKLRNGVTLNDGPTLPAG-IERVNEPEWLWPRNPPIRERKSI-----PTSWLKI 172

The diagnosis, prevention and treatment of hepatitis E virus

The diagnosis, prevention and treatment of hepatitis E virus

FE Example 1; Fig 3A; 70pp; English.

Campension describes a swine hepatitis E virus (HEV) and its natural

Cantents which are capable of cross-reacting with antibodies reactive

With a human HEV strain or natural mutants. The HEV and the proteins

CC can be used in humans to prevent possible infection The swine

CC of the used in humans to prevent possible infection by human HEV. The swine HEV can also be used as a therapeutic treatment for infection by

CC of entibodies which can be used in therapy, detection and diagnosis. The

products can also be used for determining the susceptibility of cells or

CC organs to infection with swine HEV. The swine HEV is particularly useful

CC organs to infection with swine HEV. The swine her is particularly useful

CC organs to infection with swine her and detection

CO human HEV because it is not a human virus and thus can be handled both

CC experimentally and clinically without fear of severe infection and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60 AGR------STLKDFIPVQGVYAAGRLDRDSEGLLVLTNDGVLQARLTQPGKRTGK 109

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding sulphydryl oxidase - used for prodn. of enzyme, useful in baking and for removing off-flavour from milk or beer Claim 5; Fig 7; 42pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-APR-1994 (first entry)
Aspergillus niger Sulphydryl oxidase (SOX).
Genomic sequence; Sulphydryl oxidase; scavenger molecule;
disulphide bond formation; oxidation; free sulphydryl group.

claim 9; page 224-225; 301pp; English.

The present sequence represents a protein isolated from Enterococcus faccalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids.

Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-APR-1999 (first entry)
Enterococcus faecalis protein EF124.

similar sequence in a viral strain isolated in Burma. This protein
A PCR product amplified using primers based on partial peptide fragments of purified A.niger SOX was used to screen an A.niger NA.00 genomic DNA library in lambda-EMBL4. A 2.5kb EcoRI fragment comprising the entire SOX gene was identified in positive plaques and was sequenced. Additional upstream sequence information was obtained from a 6.4kb Nsil fragment also present in positive plaques. The SOX protein is encoded by 3 exons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         encoded by the second longest ORF (ORF 2) of the Burma strain. se Q14410 for ETI.1). Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus ancies and products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein activity.

Human fibroblast growth factor homologous factor-2 (FHF-2) (W01626)
1s an ovel 30 kDa (EDS-PAGE) growth factor involved in the growth,
survival and/or differentiation of cells within the central nervous
survival and/or differentiation of cells within the central nervous
system and in the heart. Its amino acid sequence was deduced from
a clone (TSB316) obtd. from a human retina CDNA library. FHF-2
shows homology to other members of the FGF family. Recombinant
FHF-2 can be produced in host cells and used in in vitro methods,
e.g. for maintaining cells or tissues in culture prior to
transplantation. Antibodies raised against FHF-2 can be used to
treat cell proliferative disorders such as cancer, stroke,
Alzheimer's disease, Parkinson's disease, retinitis pigmentosa,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-APR-1997 (first entry)

Human fibroblast growth factor homologous factor 2 (FHF-2)

                                                                                                                                                                                                                                                                                                      New isolated Enterococcus faecalis polynucleotides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus infection

Claim 9; Page 228-229; 301pp; English.

The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1888 DOCKNALAGAEFKVTDAETGGTVARSLRSDNOGLVQVNHLQPGKXT----FVETKA-PDG 1942

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel fibroblast growth factor homologous factor 3 polypeptide -
useful for diagnosing and treating e.g. neurodegenerative diseases,
    trauma, stroke and cancer

T trauma, stroke and cancer

Example 1; Fig 7b; 79pp; English.

This sequence comprises human fibroblast growth factor homologous
    factor-1 (FHF-2), a member of the fibroblast growth factor family.

A cDNA clone (see T86315) for FHF-2 was newly isolated from a human
    retina cDNA on the basis of sequence similarity to FGF-1 (see
    W29288). FHF-1 and FHF-2 amino acid sequences were used to screen
    the GenBank database of conceptually translated DNA sequences
    (DBEST). A short region of human genomic DNA (DBEST accession
    number 76387) showed homology to approximately 25% of FHF-1 and
    FHF2. Primers based on sequence 76387 were used to amplify human
    genomic DNA and retina cDNA. PCK products were then used as probes
    to isolate full-length cDNA. clones (see T86313) for novel, claimed
    FHF-3 (see W29287), a cell growth, survival or differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93 KDEDSTYTLFNLIPVGLRVVAIQGVQTKLYLAMNSEGYLYTSELFTPECKFKESVFENYY 152

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                              .....SYTLDSLANGEWRDVTPKEN 222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1

A; Title: The genome sequence of Rickettsia prowazekii and the origin of mitochondria. A; Reference number: A71630; MUID:99039499

A; Status: unmber: A71658

A; Status: preliminary: nucleic acid sequence not shown; translation not shown

A; Molecule type: DNA

A; Residues: 1-235 < AND>

A; Cross-references: GB:AJ235272; GB:AJ235269; NID:g3861033; PIDN:CAA14993.1; PID:e134

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                         This sequence corresponds to residues 295-316 of gravin, and represents a polypeptide of the invention. The polypeptides are fragments capable of binding to type II regulatory subunit of cAMP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of FKA and protein kinase C (PKC). Gravin is also an antigen of the autoimmune disease Myasthonia gravis (MG), where a patient develops antibodies against their own nicotinic acceptionline receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of modulation of gravin and kinase. The peptides are involved in the sequence 22 AA;

Internation. In a competing effectively with the analyte for a tatached to a functional surrogate complying effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polypeptides, polysaccharides, polynucleotides, glycoproteins and lipid-containing macromolecules, as well as small haptens. Typical dlagnostic analytes for detection include cardiac or tumour markers, allergens, hormones related to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for mutuoglobulin E, prolactin, parathyroid hormone, human placental containing mattypes or antibodies against them, human proverselved the containing macromolating hormone, human placental containing macromolating hormone, contained the contained the contained or analytes associated containing macromolating hormone, human placental contained to hormone, human placental hormone, human placental hormone, human placental hormone, human placental horm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 1: Column 3-4; 13pp; English.

This sequence is a peptide fragment of mouse gamma interferon (IFN-gamma) which corresponds to amino acids 95 to 133 of the full length protein and is a scrambled version of the peptide represented in W5921. This peptide is used in a method which identifies fragments which, once internalised into a cell act as agonists and have biological activity which is comparable to the full length IFN-gamma protein. IFN-gamma agonists can bind to the cytoplasmic domain of the IFN-gamma receptor and exhibit intracellular interferon-gamma activity, inducing macrophage antiviral activity and inducing major histocompatability complex (MHC) class II expression. They can be used to treat a variety of clinically relevant disease states in animals and humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and CA125 (a tumour marker). Sequence 35 AA;
